Keep Weld Fumes Under Control Without Sacrificing Comfort

Think efficient weld fume control requires sacrificing operator comfort and weld seam quality? Think again. The RoboVent Extractor250 puts high-powered fume extraction into a lightweight, ergonomic fume gun that provides excellent control and maneuverability. At just 2.4 pounds (at 3 feet off the ground), the Extractor250 is as comfortable and easy to handle as your favorite standard weld torch.

- Gas flow and extraction flow are well balanced to give a perfect weld in any position.
- Collects 90-95% of weld fumes at the source, before they enter the welder's breathing zone.
- Rated at 250 amps with a 100% duty cycle with mixed gas and at 280 amps with straight CO₂.
- Ergonomic grip design to reduce hand fatigue and a ball-and-socket joint for greater maneuverability.
- Perfect for large weldments, tight spaces and other environments where welders are highly mobile and source capture of weld fumes is challenging.
